

A Frequency Monitoring Code (FMC) is a unique code which shows air traffic control units that are equipped with radar that you are monitoring a specific frequency.

Before selecting an FMC, you should ensure that you are operating within the FMC area designated for the appropriate Air Traffic Service. The appropriate frequency should then be selected before entering the FMC into the transponder. You must remain outside controlled and other notified airspace and are not in receipt of an Air Traffic Service. FMCs should only be used during the notified hours of operation of the nominated radar frequency.

Newcastle FMC Area

Pilots operating outside controlled airspace, but within the FMC area, who are not utilising the Lower Airspace Radar Service provided by Newcastle Radar, Teesside Radar, or Leeming Zone are encouraged to monitor Newcastle Radar on 124.380 MHz and select SSR code 3737.

Newcastle Radar **124.380 MHz**
Frequency Monitoring Code **3737**
