

A Frequency Monitoring Code (FMC) is a unique code which shows air traffic control units that are equipped with radar that you are monitoring a specific frequency.

Before selecting an FMC, you should ensure that you are operating within the FMC area designated for the appropriate Air Traffic Service. The appropriate frequency should then be selected before entering the FMC into the transponder. You must remain outside controlled and other notified airspace and are not in receipt of an Air Traffic Service. FMCs should only be used during the notified hours of operation of the nominated radar frequency.

Leeds Bradford FMC Area

Aircraft operating outside controlled airspace, but within the FMC area, who are not utilising the Lower Airspace Radar Service (LARS) provided by Warton Radar, Leeming Zone, Teesside Radar, or Humberside Radar are encouraged to monitor Leeds Radar on 134.580 MHz and select SSR code 2677.

Pilots flying within the vicinity of the Instrument Approach Procedures at Leeds East and Sherburn-In-Elmet are encouraged to establish two-way communication with Fenton Radio or Sherburn Radio, whichever is most appropriate, to obtain information on traffic that may be conducting an instrument approach to aerodromes.

Leeds Radar **134.580 MHz**
Frequency Monitoring Code **2677**
